Alarm Monitoring

Securi-Guard Monitoring not only monitor intruder alarms, fire alarms, panic alarms and lone/vulnerable worker alarms, the company can also monitor gas detectors, pressure alarms, freezer/boiler temperatures etc. In fact we can monitor virtually any premises or any piece of equipment.

Securi-Guard Monitoring uses the latest in alarm signalling technology including RedCare, Dualcom, Emizon and Digital Communicator receiving equipment which offers national monitoring from our NSI Gold Alarm Receiving Centre, which operates 24 hours a day, 365 days of the year.

At Securi-Guard Monitoring we use Sentinel Plus as our alarm handling software. This software combines simplicity of use with the flexibility to manage any alarm signalling system and is the most advanced software package of its type.

As an established company, Securi-Guard Monitoring understands the importance of choosing a suitable monitoring provider that allows installers to provide a high quality and reliable service, using the latest technology. Because we understand this, we not only provide a highly effective rapid response but also constantly review and update our monitoring equipment and personnel beyond industry standards. We also provide a secure on-line website, known as Guard-Net, allowing you as an installer to access your own information regarding your clients.

Using Guard-Net installers can update and edit their clients` information, apply holiday dates and even view `easy to understand` activation reports, as well as the actions taken by the Operator after the activation. As an installer you do not even need to contact Securi-Guard when carrying out routine maintenance or dealing with a breakdown, both you and/or your engineers can remotely put the monitored alarm on test via Guard-Net or by using a WAP enabled mobile phone.

For more information and to discuss your monitoring requirements and the services you are interested in please contact us on:
